📍 Bengaluru

Dear Hiring Manager,

I am a Data Scientist with one year of experience at CIMB AI Labs, where I work at the intersection of Generative AI, data science, and engineering to build production-grade systems. I graduated in 2025 with a B.Tech in Computer Science Engineering from IIIT Kottayam (CGPA: 8.8), and I am now seeking opportunities to contribute to teams building real-world AI products at scale.

I am a Microsoft Certified Azure AI Engineer Associate, with hands-on experience deploying and operating AI solutions on Azure in production settings.

In my current role, my work is execution-heavy and engineering-focused, centered on building production-grade AI systems rather than prototypes. I have delivered systems that combine reasoning-driven Generative AI, structured context pipelines, and scalable cloud architectures to transform complex data into actionable intelligence. This includes policy comparison platforms, cloud-deployed macroeconomic insight systems, and large-scale analytics pipelines in regulated environments, with a strong emphasis on reliability, explainability, and measurable operational cost reduction.

I am drawn to roles where AI systems are built and owned as products, with clear expectations around scalability, reliability, and impact. I focus on designing architectures with modular data ingestion, robust context handling, and reliable insight generation. My technical background spans Python, SQL, AWS, Azure, and full-stack components when required, along with explainability techniques such as SHAP, LIME, and Grad-CAM.

I am seeking opportunities in Data Science, AI Engineering, or AI-focused Software Development where I can apply this experience to build systems that deliver measurable value.

Sincerely,
Rajvardhan Das
